

Dr. Jane Goodall (1934-2025): Legacy of Hope and Action

"What you do makes a difference, and you have to decide what kind of difference you want to make."

A Revolution in Understanding

In a small forest on the shores of Lake Tanganyika, a young woman with no formal training began watching chimpanzees. Her patient observations at Gombe Stream revealed that chimpanzees make tools, have complex emotions, and live in intricate societies. These discoveries shattered the barrier between humans and animals, proving we share far more with our closest relatives than science had imagined. Gombe became the longest-running study of wild chimpanzees in history.

Empowering the Next Generation

Thirty years after arriving at Gombe, twelve Tanzanian students came to Jane's porch troubled by problems they witnessed in their community but feeling powerless to act. Jane helped them recognize their own power to create change, and Roots & Shoots was born. That spark grew into a global network spanning 100+ countries with 150,000 young people taking action for animals, people, and the environment.
